4.1. Description of first aid measures

Inhalation

Ventilate the room. Seek medical advice if feeling unwell.

Direct contact with the skin (the pure product)

Wash thoroughly with soap and water, rinsing carefully.

Direct contact with the eyes (the pure product)

Remove the contact lenses, if any and easy to do. Wash immediately and thoroughly for about 15 minutes with tap water holding eyelids open. Resort to specialized medical treatment.

Ingestion

Do not induce vomiting and do not administer anything unless expressly indicated by the physician, which should be contacted promptly. In waiting for the doctor keep the injured at rest.

4.2. Main symptoms and effects, both acute and delayed

Data not available

4.3. Indication of whether there is a need to consult a doctor immediately and special treatments

See point 4.1 Description of first aid measures.

5.1. Extinguishing means

Recommended extinguishing means:

Atomized water, CO2, foam, chemical powders, depending on the materials involved in the fire.

Extinguishing means to avoid

Direct jets of water.

5.2. Special dangers arising from the substance or mixture

Overheated aerosol containers explode and may be projected at distance violently with consequent fire hazard. Product under pressure in sealed metal case (pressure test max 15 bar). Cool down the containers with water spray trying to move them away from fire. Overheated aerosol containers explode and may be projected at distance violently (protect your head with safety helmet).

5.3. Recommendations for firefighters

Use protective devices for the respiratory tract. Safety helmet and full protective equipment. The water spray can be used to protect the people involved in the extinction. It is also recommended to use breathing apparatus, especially if you work indoors in poorly ventilated spaces and in any case if you use halogen-based extinguishers. Cool the containers with water jets.

6.1. Personal precautions, protective equipment and procedures in case of emergency

For those who do not intervene directly

Move away from the area surrounding the spill or leak. Do not smoke. Remember that overheating may project the spary at considerable distance

For those who intervene directly

Given the tightness of the spray, significant leaks are very unlikely to occur. However, if any container is damaged and may leak, isolate the spray in question bringing it outdoors or covering it with inert and non-combustible material (e.g. sand, ground, vermiculite) and be careful to avoid any ignition point that could constitute a serious fire hazard. Prevent the spilled product from reaching watercourses and drains, keep away any source of ignition, the vapors will propagate at ground level and may give rise to risks of intoxication or explosion in underground areas (basements, pits etc.). Wear gloves and protective clothing. Eliminate all naked flames and any sources of ignition. Do not smoke. Provide adequate ventilation. Evacuate the danger area and, possibly, consult an expert.

6.2. Environmental precautions

Isolate the spray covering it with inert non-combustible material (e.g. sand, earth, vermiculite).

Prevent the spilled product from reaching watercourses and drains, keep away any source of ignition, the vapors will propagate at ground level and may give rise to risks of intoxication or explosion in underground areas (basements, pits etc.).

6.3. Methods and materials for containment and remediation

Consign it exclusively to specialized companies. Contain and absorb the liquid poured, with inert materials absorbing (sand, soil, sepiolite, other specific products) and store the damaged containers in sealed containers.

6.4. Reference to other sections

Refer to points 8 and 13 for further information

ZINKALL spray

7.1. Processions on the action (may spread at pround level and form explosive mixtures with air. Prevent the accumulation of concentrations that are finamable or explosive in the air. Pressuited container. Pretect from sunlight and do not expose to temperatures is given that are finamable or explosive in the air. Pressuited container. Keep in ventilated areas. 7.2. Conditions for the secure storage, including any incompatibility (sep in explosive invertical and storage hand). The possibility of finals or impacts. Avoid the accumulation of descriptions. Avoid finance explosive instrumes and sparts. Avoid the accumulation of descriptions. 7.3. Specific and uses — 7.3. Specific and uses — 7.4. Or other acce or incinerate even after use. 10.2. Chemical Stability The aerosol remains stable for a minimum period of 36 months container is not hermetically sealed.	; under normal conditions of storage no dangerous reactions may occur if	f the
10.3. Possibility of dangerous reactions There are no dangerous reactions in the normal conditions of u	ise and by following the procedures recommended.	
10.4. Conditions to avoid n order to avoid that the metal of the container may deteriorate		
e careful to high temperatures, because at temperatures high pray deformation and even explosion. 10.5. Incompatible materials	er than 50 $^\circ\mathrm{C}$ the pressure inside the container increases and can cause	
Substances or preparations strongly acidic, basic and oxidants 10.6. Hazardous decomposition products	in general.	
n the case of thermal decomposition harmful fumes may be re	leased.	
1. Toxicological information 11.1. Information on toxicological effects		
ATE(mix) oral = 0.0 mg/kg ATE(mix) dermal = 0.0 mg/kg ATE(mix) inhal = 0.0 mg/l/4 h		
a) Acute toxicity: b) Corrosion / irritation of the skin	: not applicable : The product, if brought into contact with the skin, causes	
	significant inflammation with erythema, eschar formation or edema.	
c) Severe eye damage / irritation	: The product, if brought into contact with the eyes, causes significant irritation that may persist for more than 24 hours.	
d) Sensitisation of the respiratory tract or the skine) Germ cell mutagenicity:	: not applicable : not applicable	
 a) reproductive toxicity: not applicable 	: not applicable	
 a) specific target organ toxicity (STOT) single exposure b) specific target organ toxicity (STOT) repeated exposure 	: not applicable : not applicable	
j) aspiration hazard	: not applicable	
Related to the substances contained: Acetone		
ROUTES OF EXPOSURE	: The substance can be absorbed into the body by inhalation and through the skin.	
RISKS BY INHALATION	: A harmful contamination of the air can be reached very quickly evaporation of the substance at 20° C; however, much faste spraying or dispersion.	
EFFECTS OF SHORT TERM EXPOSURE	: The vapour irritates the eyes and the respiratory tract. The substan may cause effects on central nervous system liver kidneys gastrointestinal tract	
EFFECTS OF REPEATED OR LONG-TERM EXPOSURE	: REPEATED OR PROLONGED CONTACT MAY CAUSE DERMAT The substance may have effects on the blood and bone marrow.	fitis.
ACUTE RISKS/ SYMPTOMS		
NHALATION Sore throat. Cough. Dizziness. Headache. Vertig SKIN Dry skin.		
EYES Redness. Pain. Blurred vision. Possible corneal NGESTION Nausea. Vomiting. (See Inhalation). Kylene Kylene	damage.	
ROUTES OF EXPOSURE The substance can be absorbed interesting RISKS BY INHALATION	o the body by inhalation and ingestion. : A harmful contamination of the air will be reached slowly enough due to evaporation of the substance at 20 °C.	
EFFECTS OF SHORT TERM EXPOSURE	: Irritating to eyes and skin. The substance can lead to central nervous system effects If the liquid is swallowed; reaches the lungs it can lead to chemical pneumonia.	; if it
EFFECTS OF REPEATED OR LONG-TERM EXPOSURE	 The liquid has degreasing action on skin. The substance can affect the central nervous system. Animal tests indicate that substance may cause toxicity to human reproduction or development 	
ACUTE RISKS/ SYMPTOMS NHALATION: Dizziness. Drowsiness. Headache. Nausea.		ont.
SKIN Dry skin. Redness. EYES Redness. Pain. F SWALLOWED Burning sensation. Abdominal pain. (See als	o Inhalation)	
NOTE depending on the degree of exposure, periodic medical		
ndicated. Oral LD50 (rat) (mg/kg body weight) = 3600 _D50 Skin (rat or rabbit) (mg/kg body weight) = 4300 CL50 inhalation (rat) of steam/dust/aerosol/fumes (mg/1/4h) or	gas (ppmV/4h) = 6700	
Cyclohexane ROUTES OF EXPOSURE	: The substance can be absorbed into the body by inhalation of its	
RISKS BY INHALATION	vapors. : A harmful contamination of the air will be reached fast enough due to evaporation of the substance at 20 °C.

CHEMICALS

ZINKALL spray

Doc. SDS REACH453 00-ZINK Rev.04 - 23/05/2013

Issued on 01/03/2007

#6/7

DM of 26 02/02/ 2004

(Definition of a first list of indicative occupational exposure limit values for chemical agents)

DM of 03/04/2007

(Implementation of Directive No. 2006/8/CE of the Commission dated January 23, 2006, amending, to adapt them to technical progress, Annexes II, III and V of Directive 1999 /45/CE of the European Parliament and of the Council on the harmonization of laws, regulations and administrative provisions of the Member States relating to the classification, packaging and labelling of dangerous preparations).

Regulation (CE) no. 1907/2006 Of the European Parliament and of the Council dated December 18, 2006

Concerning the registration, evaluation, authorisation and restriction of chemicals (REACH), establishing a European agency for chemical substances, amending Directive 1999/45/CE and repealing Regulation (EEC) n. 793/93 Of the Council and the Regulation (CE) no 1488/94 of the Commission as well as the Council Directive 76/769/CEE, the Directives of the Commission 91/155/CEE, 93/67/CEE, 91/155/CEE, 93/67/CEE, 93/105/CE and 2000/21/CE

Regulation (CE) no. 1272/2008 of the European Parliament and of the Council dated December 16, 2008

On classification, labelling and packaging of substances and mixtures, amending and revoking Directive 67/548/CEE and amends the Directive 1999 /45/CE and amending Regulation (CE) no. 1907/2006.

Regulation (CE) no. 790/2009 Of the Commission dated August 10, 2009

Amending, for the purposes of adaptation to technical and scientific progress, of Regulation (CE) n. 1272/2008 of the European Parliament and The Council on classification, labelling and packaging of substances and mixtures.

15.2. Chemical Safety Assessment

Chemical safety assessment not provided.

16.Other Information 16.1. Other Information

- Description of risk phrases specified in point 3
- R10 Flammable
- R11 = highly flammable
- R12= extremely flammable R20 = harmful by inhalation
- R21 = Harmful in contact with skin.
- R36 = Irritating to the eyes
- R38 = Irritating to the skin
- R50 = Very toxic to aquatic organisms
- R53 = May cause long-term adverse effects in the aquatic environment
- R65 = Toxic: may cause lung damage if swallowed.
- R66 = Repeated exposure may cause skin dryness and cracking.
- R67 = Vapors may cause drowsiness and dizziness
- Description of hazard phrases set out in point 3
- H220 = Highly flammable gas.
- H280 = Contains gas under pressure; may explode if heated.
- H225 = Highly flammable liquid and vapors.
- H319 = Causes severe eye irritation.
- H336 = May cause drowsiness or dizziness.
- H226 = Liquid and flammable vapors.
- H312 Harmful in contact with skin.
- H315 = Causes skin irritation
- H332 Harmful if inhaled.
- H304 = May be fatal if swallowed and enters airways. H400 = Very toxic to aquatic organisms.
- H410 = Very toxic to aquatic organisms with long-term effects.

Classification based on the data of all the components of the mixture

Safety data sheet as per Regulation (EU) no. 453/2010 of 20 May 2010 and subsequent amendments

The chapters that have been modified with respect to the previous revision are highlighted with a vertical line on the left

This safety data sheet fully replaces all previous versions.

The information in this safety data sheet were obtained using the best information available on the date of revision specified herein. Neither the owner Company nor the subsidiary companies will accept complaints arising from improper use of the information given herein or by improper use of the product. Pay particular attention to the use of the preparations because improper use may increase the hazard.
